This table saw allows users to deliver their cuts faster. The table includes on-tool storage under the table, storing all the accessories. The ergonomic soft-grip handle and optimized center of gravity help make transporting this 52 lbs. saw easy. It has dual-side handles that are positioned to make it easier to load the saw into a truck or set up on a stand or work platform. The base stacks on the side for transport and stable storage. The all-steel base is durable and helps the saw to hold up against impacts and other heavy-duty job conditions. This lightweight base comes with rubber feet to help give it great stability when in use. It offers on-tool stowing under table, storing the SquareLock rip fence, Smart Guard System, miter gauge, push stick and wrenches under table for protection during transport and storage. With auxiliary fence slots and a T-slot miter gauge, this fence has been designed to be the best and most accurate in the business. It is able to easily glide along the rail for easy one-handed operation and quick locking into place. The riving knife prevents material from pinching the blade and offers positions for full upright, splitting and non-thru cutting. The rawls and riving knife provide superior control over the material while cutting. <http://evergreencans.com/userfiles/compass-m2-user-manual.xml>

It has a tool-free dust chute clearout on the back of saw for easy maintenance. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Amazon Customer 5.0 out of 5 stars Here's what I would say about the saw I received 1 It is a jobsite saw. It has limitations. Should you look to build fine furniture with it. Nope, but I dare say that you could, if you're willing to put a lot of extra effort into your measurements between every cut, and if you don't mind some waste. Absolutely! I use mine for building faith chests for our church. I work in an extremely limited space in my basement shop is about 160 square feet so any table saw larger than this one is out of the question. But it handles the cuts I need with plenty of power and the accuracy I need for my purposes. 2 It is relatively safe. Would I love to have a SawStop. You bet, but as I just indicated, I don't have the room, and I also don't have the money to invest in one. The riving knife works well, my fence is straight, and I even keep the blade guard on most of the time. 3 It seems well made. Yes, the engine is a screamer, but you should be wearing ear protection regardless, and I wish it had a soft start, but it doesn't so. There is a lot of metal in the Bosch, and the plastic is fairly well protected by the roll cage. If you're looking for a saw that don't want to have to baby at the end of the day when you throw it in the back of your truck I'm not a contractor, but I've seen the way their trucks look at the end of a day this is a great candidate. 4 I eventually bought the stand for the saw, and love it. I keep the saw out, on the stand, and I can move the entire unit into the spot I need it to

be, with very little exertion. All in all, the saws greatest deficiency is its size.<http://www.hitasyymm.com.tr/userfiles/compass-magnum-420-manual.xml>

I dont rip 4x8 sheets of plywood on it; I go out in the garage with the circular saw for that. But Ill likely never have a shop begin enough to rip 4x8 sheets of plywood my shop, as I mentioned, is in the basement, not the garage, and I live in the upper midwest, so I dont see that ever changing we need to have space for cars in the garage during the winter so I dont need a saw that can do that. I just need a saw that cuts straight, doesnt bog down, is small, and, if need be, can travel. The GTS1031 does all of that for me. So my five star rating is based on whether the saw met my expectations. It has, in every way. I am a contractor, so it did see some use, but we do not pull the table saw out every day. Or every other day. It lasted just over a year, and was driving me nuts before it crashed. The fence sucks and wants to be crooked more than straight. Measuring the front of the blade, then the back of the blade every time after two months of use. The depth adjustment started out easy to use, but then got real sticky, and the last 6 months needed to be pushed down forcefully before dialing it down to lower it. So that lasted 8 months before it failed. The stand is still in tact. The saw recently just blew a bearing I am guessing, or the brake came back to life full time, even when running. That is another thing, the brake went out, to stop the blade after turning it off, after about 68 months. Nasty metallic sound, and real rough if you hand spin the blade now, like metal bits through the gears. Again, I would say the table saw comes out of the trailer on average once a week, and we dont do anything that would warrant these defects. I like the size, it did everything I bought it for, but was built to a way lower standard than their larger saws. Would not buy again. Once it arrived I appreciated the light weight and size. Since I wanted to use this saw for cabinetry this is unacceptable.

I should have paid more attention to the reviews as blade wobble appears to be a chronic problem with this saw. If you are going to use this saw for cutting framing then it will work. If you need precision cuts, you need to look else where. Thank goodness for the Amazon return policies and me keeping the packing materials as the saw is going back. Full time furniture maker and I use this every day. My shop is limited on space so I wanted something with the power of a cabinet saw in a compact form. One important safety feature I was looking for was a riving knife and the one here works wonderfully. The only cons I can think of would be the material on top. A smoother surface would be nice for feeding but it doesn't seem to impede operation. This first time I changed blades the arbor nut was very difficult to remove with the wrenches provided. The wrench provided is basically worthless. Other than a few small projects here and there this saw was very lightly used. Im a hobbyist not a contractor. Unfortunately, despite the light use the saw motor started making a grinding noise. Im very handy so I took the motor assembly apart and found a small sliver of metal inside the bearing. Bottom line is that I wish I would have purchased the DeWalt DW 745!! It is being sold above the MRP. I have reported this issue multiple times. But no one gives a damn about it. Sorry, we failed to record your vote. Please try again The Dewalt Saw was lighter 42lbs vs 53lbs for the Bosch and featured a larger 24 inch rip capacity while the Bosch had to make do with 18 inches. The Bosch on the other hand had the capability to use an 8 inch dado set while the Dewalt couldnt do dados. I examined both saws closely at a tool superstore in Victoria BC and noticed that the Bosch was an all around sturdier saw. Where the Dewalt saw used plastic to save weight, the Bosch saw used steel to gain strength.

<http://www.drupalitalia.org/node/76266>

Also the Dewalt saw had to be stored flat and level while the Bosch saw could be stored on its side where it takes up half the shop space. I chose Bosch as the GTS1031 was a better fit for the kind of woodworking I wanted to do. I took out the included Bosch blade and replaced it with a Freud LU79R010 80 tooth thin kerf plywood and melamine blade and the saw shined. With the new blade my practice cuts on Baltic Birch plywood were perfect. A finishing ready raw plywood edge that

didn't require any sanding as well there was no tearout. I would have given the saw a five however there is a serious safety defect in the design of the saw. The place where the cross bar slips into the riving knife is very flimsy leaving much play when the blade guard is installed. It appears that the saw simply relies on the weight of the guard assembly to hold it in place and when it is supposedly locked in place it can easily be knocked out. This resulted in a terrible accident when I was cutting a half inch thick piece of Baltic Birch using the mitre gauge to assist in a 90 degree crosscut. The cross bar slipped out of the rear notch on the riving knife and the metal fork hit the new Freud LU79R010 blade knocking several teeth off. Luckily I was wearing safety glasses and was immediately able to hit the off switch. Why couldn't Bosch use a positive form of attaching the blade guard to the riving knife. Had they used the same method of a sprung bolt going through a hole in the riving knife, that was used to attach the antikickback device to the riving knife this accident never would have happened. How I see it Bosch owes me a new Freud blade. The safety guard can't even be attached to the riving knife, it can only be clicked into a wobbly unsafe position. Hopefully Bosch and Amazon stand behind their products enough to make things right again. I feel I deserve a replacement Freud blade and a new safety guard. Sorry, we failed to record your vote.

<http://dieter-sauter.com/images/canon-s110-manual-english.pdf>

Please try again I intend to use this with my generator up at my off grid cabin. There are things I like about it and some things I don't but overall I would recommend this table saw. It's very well designed and I have begun testing it out in the attached video and will test it out on the generator I intended to use it with. Sorry, we failed to record your vote. Please try again I got the folding stand and dust bag as well. The saw and even the well built folding stand are heavy the guy in the video for it makes it seem like you are hauling a rag doll. Despite being heavy, the saw unit is awesome with the various attachments hidden nicely. The stand is easy to put together and sturdy and strong when the saw is easily put on it. I was going to go for Dewalt but having a dust bag to attach means I can bring this thing into the basement in the winter not lucky enough to have a garage or shed here to use power tools year round. Looking forward to many years of this little critter sawing up boards for me..oh..look through the reviews as I did buy because of similarity to Dewalt but Dewalt no collection bag and different requirements for power if you are not using it while hooked into straight 110 power. Sorry, we failed to record your vote. Please try again It sure beats the Mastercraft saw I was using. I put a 60 tooth DeWalt blade on it and it cut some laminate flooring nicely. I did make some minor adjustments out of the box using a combination square to make sure the mitre gauge lined up with the true blade angle this is covered in the included instruction booklet. Lastly I chose this over a similar DeWalt model because this saw has less plastic and more steel in its construction, which does add a few pounds to the overall weight. Sorry, we failed to record your vote. Please try again On board storage of tools is very nice. The settings for the riving knife are somewhat touchy. I had one incident where it loosened during a cut.

<https://diatecgroup.com/images/canon-s110-manual-focus-ring.pdf>

I stopped the cut in time before it damaged the blade but now I'm even more careful setting it. I bought the dado throat and found it easy to change out the blade. The motor is powerful and handles cuts well. The miter gauge is a bit flimsy but does the job. The fence sets up easily and is solid. The height adjustment wheel moves the saw up and down with ease. Overall happy with my purchase. Sorry, we failed to record your vote. Please try again It had the better reviews and many mentioned the quality, precision and ease of setup out of the box. Some also mentioned the power the saw has. Deal done and in two days, just before Christmas the saw was delivered. It is as the reviews said, easy to set up, extremely powerful and had the quality I was looking for. Most important is the power it has. Many people buy a lesser machine and try to push it beyond its abilities. This has more than enough power making it safer as you'll not need to push it to make the cuts required. Needless to say I would recommend the Bosch, just make sure you check out pricing

on Amazon before running of the your local box store. Sorry, we failed to record your vote. Please try again I had an issue I brought up with Bosch Feb 12th, the blade appeared loose, would move left to right but attaching nut tight. After many emails Bosch decided this condition was in fact bad so I ordered another saw only to find the same issue. Was directed to there technical department that had to contact Germany to find specs for this problem and told they would contact me the next day, close to 2 month now and still no answer from Bosch about an issue they deemed unacceptable. Wonder every time I run some wood if something is going to fly apart. Sorry, we failed to record your vote. Please try again La escala esta en sistema imperial, deberian hacer una escala milimetrica. Junto con las patas plegables que se venden por separado es una maravilla. Yo trabajo en mi depto y puedo guardarla facil en su lugar asignado.

Sorry, we failed to record your vote. Please try again The riving knife was wayyyy off from factory and the blade was set to about 87 degrees instead of 90. Make sure you double check all you alignments before trying to use the saw. This is the first time Ive been disappointed with a Bosch. On the plus side its very compact, light and on Amazon its cheaper than at Lowes. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Le moteur est peut etre la meme force que le 4100, mais pas Silencieux. Bruyant comme une Scie a Onglet. Le guide laterale ne coulisse pas bien. Les coulisses arriere et avant se Puck facilement. Tres Fragile pour un outil de chantier ! Sorry, we failed to record your vote. Please try again Con la sierra correcta realiza todos los cortes que necesitas con suavidad, calibrarla es sencillo y su potencia es acorde a todo lo que se va a enfrentar. Lo unico malo es que no hay en Mexico y hay que comprar a parte la bolsa para el polvo de aserrin Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again So easy to use, easy to carry, easy to store. Cuts like a dream and never lets me down. I would recommend this any day for the quality but also the price. I believe its priced slightly cheaper than the dewalt table saw which in my opinion doesnt make sense. I love Dewalt tools but when I see a Bosch table saw I know its quality. Now Ive used it, tested the theory and its still quality. Sorry, we failed to record your vote. Please try again Page 1 of 1 Start over Page 1 of 1 In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Learn more The truth is if you're in any way interested in the quality of your woodworking or timber cutting, you really can't afford not to use a table saw.

[www.pferde-fuer-unsere-kinder.de/wp-content/plugins/formcraft/file-upload/server/content/files/1626c68ccf0117---82-honda-nighthawk-650-repair-manual.pdf](http://www.pferde-fuer-unsere-kinder.de/wp-content/plugins/formcraft/file-upload/server/content/files/1626c68ccf0117---82-honda-nighthawk-650-repair-manual.pdf)

The Bosch GTS1031 is one such option that ticks many of the boxes for both keen DIYers and professional tradespeople alike. With its powerful 4HP motor, more than adequate rip capacity, the ability to quickly and easily change the blade, important builtin safety features to give you peace of mind while using it, along with the reputation enjoyed by its manufacturer Bosch, there's no reason why it shouldn't feature high on your list of options. That's all well and good, but is it the right choice for you, though. It's also sturdy and powerful enough thanks to its metal frame and 4HP motor to make it an excellent choice for professional tradespeople, too. What It Can Be Used For The following types of cut are possible with the Bosch GTS1031 either using the existing 24T carbide blade or by changing out the standard blade and insert Rip cuts Cross cuts Miter cuts Bevelled cuts Dado cuts Rabbet cuts Worktops Powerful Cutting Ability Want to cut through the toughest of hardwoods with ease. In that case, you're going to need a table saw with a good horsepower output, and at 4HP from the Bosch GTS1031, it's one of the most powerful table saws on the market. The cutting surface itself is a 10inch, 24tooth carbide blade, which when combined with the powerful 15amp, 5000 RPM motor, gives you plenty of cutting power to handle virtually any DIY requirement and the majority of commercial woodworking requirements with ease. Carbide blades can also cut through more robust materials that would usually destroy conventional cutting blades, giving you the peace of mind that the GTS1031 will be able to handle whatever you throw at it. Power is just

one aspect of a useful table saw, though. Just as necessary is the flexibility to handle a variety of cuts, and the GTS1031 makes this possible thanks to some of the features which we'll discuss in the next section. Cutting Capacity As mentioned, the Bosch GTS1031 comes as standard with a 10inch, 24T blade size.

Well, this blade size is a popular choice on a lot of table saws including the GTS1031 and the DEWALT DWE7480, as while they do provide a rougher cut versus blades with more teeth for example 5080, the larger gaps between the teeth allows for dust to be ejected more efficiently, resulting in lower heat buildup and reduced motor strain helping you cut larger, tougher requirements much more easily. The good thing is that you're not limited to this blade type with the GTS1031, as you can change out the blade in a flash if you'd prefer a highertoothed option for smoother cutting. Just turn the wheel located on the front of the table saw, adjust the bevel angle to whatever is required indicated on the visual gauge, and lock the angle using the red bevel lock handle and you're good to go! Here are just a few of the features that make it as easy as possible to use Switching it on is a case of pressing a single button. Don't worry about removing the entire table top to change the blade. Simply remove the handy red table insert to change the blade in a flash. The squarelock rip fence features an exclusive selfalign feature which you can quickly and easily move or lock into place by raising or lowering the lock handle. The dust chute can be accessed without tools for even easier cleaning and maintenance. The Smart Guard system is not only adjustable 3 positions, but its components Riving Knife, AntiKickback Device, and Barrier Guard Device are all part of a modular system that requires no tools to assemble or disassemble. The Bosch GTS1031 features undertable storage to keep items such as the rip fence, smart guard system, push stick, wrench, and cable cord safe, secure and accounted for during transportation or storage. It also features a balanced onehanded carry handle to aid portability and make transportation as easy as possible.

**Sturdy Construction** If you're a professional contractor, you probably don't have the luxury of keeping your table saw safe and secure in your workshop. As such, you're going to need a table saw that is sturdy and durable enough to handle all of the bumps, knocks, and scrapes it'll experience on the job site. Thankfully, this is well within the remit of the Bosch GTS1031 given its durable, allsteel base design. Don't worry about too much additional weight either, as it's designed to be as lightweight only 52 lbs and portable as possible despite its sturdy credentials. The durable fourleg design of the GTA500 helps keep the table saw planted during use and at a more convenient working height whenever it ventures outside of your workshop and onto the job site. **Safety Features** It shouldn't come as a surprise that table saws can be dangerous to use if you don't follow the manufacturer's guidelines correctly. Besides detailing key safety instructions in the owner's manual, this Bosch table saw also comes with some essential safety features which help increase safety and reduce the risk of injury to the user. It's worth noting that each of these safety features are built around a modular design, meaning you can quickly add or remove them without tools as quickly and easily as possible we never recommend removing them during use, but it's handy that they can be taken off so quickly when preparing to store the GTS1031. Firstly, there's the Riving Knife and AntiKickback Device which is an important safety feature on any table saw, and its purpose is to keep the two cut sections of timber separate as you send a piece of timber through the table saw to prevent dangerous kickback. Kickback is particularly prevalent during the rip cuts which the GTS1031 specializes in, and while the riving knife cannot prevent it entirely always follow the correct usage procedures to minimize the risk of kickback as much as possible, it does a good job of eliminating a good portion of the risk.

Next up is Barrier Guard Device, and its purpose is to reduce the risk of the operator's hand coming into contact with the rotating blade. In the case of the GTS1031, this features a transparent design to provide as much visibility as possible while increasing the user's safety. As mentioned above, each

of the removable safety features can be stored under the Bosch GTS1031's table while not in use see image below. It comes packed with more than enough features to make it a good match for more expensive table saws on the market, yet comes at a low enough price tag to offer considerable value for money. The main drawback in our opinion is the smaller than average rip capacity both left and right of the blade, with there being alternative table saws in this price bracket that offer a considerably larger cutting capacity. We'd also welcome a softstart and motor brake function, but if we're honest, the Bosch GTS1031 is still more than enough table saw for the vast majority of keen DIYers and professional tradespeople, and shouldn't be overlooked as a result especially at this price point. We've included a summary of the various advantages and disadvantages of this particular Bosch table saw below to help you make up your mind. DIYers and professional tradespeople can handle the majority of their cutting needs with ease thanks to the GTS1031's high no-load speed of 5000 RPM and durable 10-inch, 24T carbide blade. Take advantage of the extendable table top to support larger pieces of timber during working, and the squarelock rip fence's exclusive self-align feature which can be easily moved or locked into place by simply raising or lowering the lock handle. Stay safe given the GTS1031's Smart Guard system which is not only adjustable 3 positions, but its components Riving Knife, AntiKickback Device, and Barrier Guard Device are all part of a modular system that requires no tools to assemble or disassemble. Safe and quick!

Be confident in the GTS1031's ability to handle all the bumps, knocks, and scrapes you can throw at it given its durable all-steel base design. Store and transport it easily thanks to its relatively lightweight 52 lbs and its balanced carry handle. It doesn't feature a motor brake to stop the blade after shutting off. It doesn't have a softstart function. Popular Comparison DEWALT DWE7480 vs Bosch GTS1031 Other than the manufacturer, there are surprisingly few differences between the DEWALT DWE7480 vs Bosch GTS1031. The GTS1031 also features a slightly higher no-load speed of 5000 RPM versus 4800 RPM, and it weighs slightly more at 52 lbs versus the DWE7480's 48 lbs surprising given that the DEWALT model is quite a bit larger than the Bosch table saw. We've written a full feature of the DEWALT DWE7480 table saw if you'd like to learn more. Here is a summary of the key details for each model Scroll table if needed Or, perhaps you'd rather use a dado cutting blade instead of the standard blade that comes with the GTS1031. Not a problem. Bosch has you covered with the following GTS1031 accessories Bosch GTA500 Folding Stand for GTS1031 Saw It features a lightweight 14lbs, foldable design that makes it easier to transport and store while being durable enough to handle all of your needs at the job site. See It on Amazon Check Price Bosch TS1012 Zero Clearance Insert GTS1031 It is helpful when performing precision cuts at 90 degrees as it reduces kerf clearance and supports wood closer to reduce chipping. See It on Amazon Check Price Bosch TS1013 Dado Cutter Insert for GTS1031 See It on Amazon Check Price Frequently Asked Questions How much assembly is required. There is minimal assembly required, other than attaching the GTS1031's smart guard system and the blade. You can find full assembly instructions along with diagrams in the owner's manual. Does it come with a blade. Yes, it comes with a 10-inch, 24-tooth carbide saw blade. Does it come with a stand.

No, not as standard. You can use the GTA500 stand with this particular Bosch table stand as shown above. Does it feature a soft start function. No, there is no soft start function on this Bosch table saw. Is the blade height adjustable. Yes, the blade's height can be adjusted. Does the GTS1031 feature a motor brake. No, the Bosch GTS1031 doesn't feature a motor brake to stop the blade after shutting off. What is the maximum rip size of the Bosch GTS1031. Does the GTS1031 accommodate dado blades. Yes, although the Bosch TS1013 Dado Insert will be required when changing the standard blade see accessories section above. Does the top need to be removed to change to a dado blade. No, you don't need to remove the entire top to change the blade. The GTS1031 features a handy red table insert that you can remove quickly and easily to speed up changing the blade. Can a zero clearance insert be used with this Bosch table saw. Yes, Bosch manufactures and supplies the TS1012 Zero Clearance insert which can be used with this model. See the GTS1031 accessories

section above for more details. By continuing to use this website you are giving consent to cookies being used. For information on the types of cookies we use please visit our Privacy Policy. Ok. It features a compact design and multiple grip areas for easy and convenient transportation. The saw's impressive 1,800 W motor delivers its powerful cutting performance for fast work progress. Additionally, a toolfree lowering of its riving knife enables quick adjustments for creating concealed cuts. Click OK to extend your time for an additional 30 minutes. The charge will show on the product detail page of applicable products. Offer subject to change without notice. Nonexpedited orders are processed for shipment within two business days of payment verification, excluding holidays. You will receive a shipping confirmation email once your order has shipped.

The email will provide your tracking number and link to the shipping carriers tracking page. This tool features the Smart Guard System, which helps provide improved control over material while you cut, using a riving knife system, antikickback pawls and modular blade guard. With a maximum cutting speed of 5,000 rpm, the Bosch 10inch portable jobsite table saw uses its heavyduty 4 hp motor to cut through tough materials fast. For durability, the saw has an allsteel base that protects the tool from harsh working conditions and accidental drops. Carrying the lightweight Bosch compact jobsite table saw is easy with the onehanded carry handle. For convenience, the tool also has onboard storage for your rip fence, wrenches, miter gauge and smart guard.
